Supplementary Figure S1. Prognostic value of PD-L1 protein expression and correlation with mRNA levels according to cell of origin in cohort 1. Correlation of PD-L1 gene expression with protein levels in tumor (A), immune (B) and total (C) cells, (Mann-Whitney test, ***, p<0.001); Survival analysis (Kaplan-Meier estimate) with the distant metastasis-free interval (DFMI) as a clinical endpoint in breast cancer patients split by PD-L1 IHC expression in tumor (D) and immune (E) cells.
